JOB DEMANDS ANALYSIS

Company: Greater Vancouver Regional District  Location: Lion’s Gate

Job Title: Sewer Plant Operator  Classification: Regular Duty

Purpose of Activities

The purpose of the duties of the Sewer Plant Operator is to make certain that the sewage treatment plant runs effectively and safely.

Tools and Equipment

The labourer will use the following tools and equipment to perform their duties:
- Gloves.
- Safety Hat
- Safety Boots.
- Safety Vest.
- Shovels, rakes, broom and other hand tools.
- Wheelbarrow.

Usual Methods

Much of the operator’s day is spent moving around the site and making adjustments to controls and valves. Other elements of the job include monitoring plant functions and assisting other people with maintenance projects. They also carry out some light labour duties like cleaning, handling sample rods, hoses, lifting grates for cleaning, turning valves with a key or by hand.

There is also regular SCBA training and confined space rescue simulations. It is also possible that a real rescue may have to be performed. The position involves a lot of walking, sitting, standing and light stair-climbing.

Administrative Issues

The operator works throughout the plant on an eight-hour day shift. There are four operators at Lion’s Gate (many more at other plants where there are secondary
processes) and one foreman. They rotate days to cover the seven days each week and rotate call duties to cover nights.

The work requires moving between outdoor and indoor environments. Some of the indoor work involves exposure to raw or slightly processed sewage. There are certain areas where spaces are very confined and noise levels are high enough that hearing protection is required.

Activity Demand Variables

These variables are tasks that must be carried out by the employee and are implicitly or explicitly required as objectives of the job.

- Work in some confined spaces.
- Walk over concrete and stairs.
- Climb up and down ladders.
- Carry out some tasks under unpredictable outdoor conditions that often include steady rainfall.
- Exposure to sewage.

Worker Decision Variables

These variables are the sub-routines and cognitive/physical decisions made by the worker in carrying out the objectives of the job.

- Choose postures for carrying out duties (e.g. lifting using hips and maintaining neutral spine, creative energy saving techniques).
- Planning of lifts and routes for carrying (limited).

Accommodative Considerations

1. Individuals with knee, hip or ankle difficulties may find they have difficulty with this job because of constant walking.
2. Individuals recovering from systemic illness should be carefully screened before entering this activity.
3. Individuals who do not cope well in outdoor work environments would have difficulty with this position.
4. There is a learning curve associated with the tasks.

Prepared By: Greg Hart, Kinesiologist March, 1999
Summary of Stresses

**Metabolic Stresses**

The aerobic energy system supplies the vast majority of energy required to complete the tasks in this position since the work is ongoing in nature. There is also a high anaerobic power requirement associated with occasional heavy lifts.

**Structural Stresses**

There is regular walking associated with this position, but there is enough variation in the work that there is little in the way of accumulated structural stresses. There is occasional lifting, pushing and pulling that has implications for the spine and for the shoulders and upper extremities.

As long as significant sitting is avoided, there is minimal associated structural stress to the operator.

**INTERVENTIONS**

Recommendations that could be implemented to increase productivity and lessen the risk of injury are listed below:

1. Encourage the workers to maintain an increased level of fitness away from work that will focus on cardiovascular endurance, anaerobic power, muscular strength, muscular endurance and flexibility. Especially cardiovascular endurance.

2. Provide regular education in effective use of the body and neutral joint positions for this type of work.

3. Insure that sitting is never carried out for long durations (longer than 30 minutes at a time).

4. Avoid asymmetrical lifts wherever possible.

5. Avoid twisting with a load to avoid damage to discs in the spine.

6. Plan the route when manually handling materials.

7. Take a moment to extend the spine and warm up the body when switching from sitting to strenuous activities.
8. Review footwear to insure that safety wear also is as light as possible with excellent heel and forefoot support.

* Frequency Legend:

1 = Seldom; Not Daily
2 = Low Daily Activity; < 1hr
3 = Moderate Demand; Repetition 1 - 3 hrs daily
4 = High Frequency Demand; Repetition > 3 hrs daily

**REQD** is marked with an X if the particular demand or category is relevant to the purpose of the job.

**SIDE** refers to the side or limb required to execute a task. If it is marked E, it indicates either side, the most common choice is listed first. D refers to dominant and B to both sides.

### PHYSICAL DEMANDS

- **Hearing - Conversations**: B X Colleagues in person, via phone, via radio
- **Hearing - Other Sounds**: B X Alarms, machinery noises
- **Vision - Far**: X Most activity
- **Vision - Near**: X Examine parts or gauges closely
- **Vision - Colour**: X
- **Vision - Depth**: X Distances have to be judged when raising and lowering things
- **Perception - Spatial**: X Many tasks involve working around obstacles
- **Perception - Form**: X
- **Feeling (Tactile)**: X
- **Reading**: D X Computer screens, gauges, instructions, correspondence
- **Writing**: D X
- **Speech**: X Talking with colleagues
- **Inside Work**: X In buildings and tunnels
- **Outside Work**: X On grounds
- **Hot Conditions >25 deg. C**: X Occasionally, during summer months
- **Cold Conditions <10 deg. C**: X Can be exposed (outside) briefly during the winter time
- **Humid**: X In some enclosed spaces with water, outdoors on some days
- **Dust**: X
- **Vapor Fumes**: X Sewage fumes
- **Hazardous Machines**: X
- **Proximity to Moving Object**: B X Some enclosed areas in the plant - very loud (>110 db) equipment
- **Noise**: B X From engines and pumps in the buildings
- **Electrical Hazard**: X Around water constantly
- **Vibration and Related**: X Chlorine and cleaning substances
- **Organic Substances**: X Raw and partly processed sewage water
- **Medical Waste**: X
- **Blood Products**: X
- **Congested Worksite**: X Some very confined spaces that may require SCBA wearing
- **Lighting - Direct**: X Daylight
- **Lighting - Indirect**: X
- **Lighting - Adjustable**: X
- **Lighting - Fluorescent**: X Some interior areas
- **Lighting - Incandescent**: X
- **Lighting - Shadows etc.**: X

* Frequency Legend:

  1 = Seldom; Not Daily
  2 = Low Daily Activity; < 1hr
  3 = Moderate Demand; Repetition 1 - 3 hrs daily
  4 = High Frequency Demand; Repetition > 3 hrs daily

The following shading denotes a **HIGH RISK TASK:** Modifications should be considered

**REQD** is marked with an X if the particular demand or category is relevant to the purpose of the job.

**SIDE** refers to the side or limb required to execute a task. If it is marked **E**, it indicates either side, the most common choice is listed first. **D** refers to dominant and **B** to both sides.
